28.—31.5.2026

The title of the exhibition functions as a poetic frame for approaching memory; our shared theme. Memory operates on two overlapping yet contradictory levels: as lived, experiential image, and as a physical process—electrical activity within the brain. Beneath what is felt or remembered, another material reality persists; the physical mechanics of a biological organic system.

NIKLAS FEINIK (b. 1992, Tampere) is a Helsinki-based artist who graduated with an MFA from the Academy of Fine Arts, Helsinki, in 2025. His practice moves between photography, video, and installation. Feinik’s work originates from “inner media”—early childhood films and video games that have shaped his worldview and intertwined with personal memory. These mediated experiences coexist with lived memories, influencing how he perceives reality and constructs exhibitions. His installations explore the merging of psychological and exhibition spaces, creating immersive environments that function like rooms of the mind. Recurring motifs include translucent, candy-like relics embedded in clay, evoking memory and materiality, alongside an ongoing exploration of the tension between virtual and physical worlds. Feinik has exhibited actively in Finland and internationally. He is currently supported by the Kone Foundation.

TUURE LEPPÄNEN (b.1999, Helsinki) is a visual artist working with photography. He often uses small—and often seemingly inconsequential—details from his, and others’, personal lives as points of departure for projects that touch on how machines affect the way we remember the past, experience the present, and head towards the future. Leppänen holds a MFA from the Academy of Fine Arts Helsinki, having also attended Akademie der Bildenden Künste Wien.
